ROLL NUMBER: 210701103

#### Ex No: 2 BUILD A SIMPLE NEURAL NETWORKS

# AIM:

To build a simple neural network using Keras/TensorFlow.

### **PROCEDURE:**

- 1. Download and load the dataset.
- 2. Perform analysis and preprocessing of the dataset.
- 3. Build a simple neural network model using Keras/TensorFlow.
- 4. Compile and fit the model.
- 5. Perform prediction with the test dataset.
- 6. Calculate performance metrics.

### **PROGRAM:**

```
# first neural network with keras make predictions
from numpy import loadtxt
from tensorflow.keras.models import Sequential
from tensorflow.keras.layers import Dense
# load the dataset
dataset = loadtxt('pima-indians-diabetes.csv', delimiter=',')
# split into input (X) and output (y) variables
X = dataset[:,0:8]
y = dataset[:,8]
# define the keras model
model = Sequential()
model.add(Dense(12, input shape=(8,), activation='relu'))
model.add(Dense(8, activation='relu'))
model.add(Dense(1, activation='sigmoid'))
# compile the keras model
model.compile(loss='binary crossentropy', optimizer='adam', metrics=['accuracy'])
# fit the keras model on the dataset
model.fit(X, y, epochs=150, batch_size=10, verbose=0)
# make class predictions with the model
predictions = (model.predict(X) > 0.5).astype(int)
```

# summarize the first 5 cases

for i in range(5):

print('%s => %d (expected %d)' % (X[i].tolist(), predictions[i], y[i]))

## **OUTPUT:**

```
Jupyter 210701103-DLC-Exp1 Last Checkpoint: 28 minutes ago

        77/77 [================================] - Os 1ms/step - loss: 0.4836 - accuracy: 0.7773
        Fpoch 150/150
77/77 [=========] - 0s 1ms/step - loss: 0.4901 - accuracy: 0.7721
       <keras.callbacks.History at 0x1d0ae27aec0>
   [9]: _, accuracy = model.evaluate(X, y)
       print('Accuracy: %.2f' % (accuracy*100))
        Accuracy: 78.65
```

## **RESULT:**

Thus a simple neural network using Keras/TensorFlow is built.
